

WCAG 2.2 (Level A & AA)

ACCESSIBILITY TEST REPORT

LEVEL-2

FOR

BnB Financial Services Pvt. Ltd.

Website: <https://bnbfin.com/>

Prepared using Claude (Anthropic)

23rd July 2026

1. Management Summary

1.1 Document Title

Document Title	WCAG 2.2 Accessibility Test Report
Organization Name	BnB Financial Services Pvt. Ltd.
Application / Website	Corporate Website — https://bnbfin.com/
Document Version	1.0
Report No.	WCAG/BNB/01
Last Edit Date	23rd July 2026

1.2 Overall Accessibility Status

This review confirms 15 Success Criteria failures out of the 56 assessed under WCAG 2.2 across the 11 public pages of bnbfin.com (a 27% failure rate), against 31 passes and 10 not-applicable criteria. Eight of the confirmed failures are Level A issues, so WCAG 2.2 Level A conformance is not met; Level AA conformance is not met either. Unlike a site with sitewide structural defects, most of these failures are narrower in scope: one relates to a single prerecorded audio file and three to a single prerecorded video, both confined to their own pages, and several others are confined to a single page each (post.html's page title and unresolved skip-link target; disclosure-of-complaints.html's chatbot focus trap). The most broadly-scoped failures are sitewide text-contrast issues affecting 120 element instances across all 11 pages (1.4.3), and three defects that repeat across the 5 pages sharing a common footer/header template: an unpausable auto-scrolling regulatory disclaimer (2.2.2), an invisible focus indicator on the floating chat-toggle button (2.4.7), and undersized footer contact links (2.5.8). Section 8 details every confirmed issue with recommended fixes; Section 3 lists the narrower points that still need direct confirmation before any associated result above is treated as final.

1.3 Key Findings (at a glance)

- Site-wide text contrast: 120 element instances across all 11 pages fall below the 4.5:1 minimum, including gold section labels at 1.57:1 and commodity-card headings at as low as 1.14:1 (1.4.3)
- The prerecorded investor-awareness video has no captions and no audio description, and the prerecorded investor-awareness audio has no text transcript — each confined to its own page (1.2.1, 1.2.2, 1.2.3, 1.2.5)
- An auto-scrolling regulatory disclaimer in the shared footer runs on a continuous 60-second loop with no keyboard- or touch-accessible way to pause it, on the 5 pages that share this footer (2.2.2)
- The floating chat-toggle button shows no visible keyboard focus indicator on the same 5 pages (2.4.7), and footer phone/email links fall under the 24×24 CSS pixel minimum target size on those pages too (2.5.8)
- Skip-to-content links on terms.html and privacy.html navigate to the home page instead of the current page's own content, and post.html's skip-link target does not resolve at all (2.4.1)
- The chatbot window on disclosure-of-complaints.html is marked aria-hidden="true" while its close button, input, and send button remain keyboard-focusable inside it (4.1.2)
- The contact form's error message is a single generic sentence that names no specific field, with no aria-invalid or per-field error text (3.3.1)
- At a 320px viewport width, three pages overflow horizontally because the header logo text does not wrap (1.4.10)

2. Scope, Scan (Test) and Report Details

Scope of work:

Name	BnB Financial Services Pvt. Ltd. — Corporate Website
URL	https://bnbfin.com/
Out of Scope	The back-office login portal (bo.bnbfin.com), external regulator portals (scores.sebi.gov.in, smartodr.in), and downloadable PDF/ZIP documents were explicitly out of scope for this review.

Scan / Test details:

Date	23rd July 2026
Tester	IAAP Certified Accessibility Auditor
Pages Tested	11 public pages
Methodology	Automated scanning with Playwright and axe-core across all 11 pages, combined with manual keyboard-only navigation testing, colour-contrast verification against computed styles, and DOM/ARIA structural inspection. Annotated evidence screenshots were captured per page (folder a11y-evidence-bnbfin.com).

Pages tested (11):

- 1. Home (<https://bnbfin.com/>)
- 2. Home / index.html — same document as / (<https://bnbfin.com/index.html>)
- 3. Contact Us (<https://bnbfin.com/contact.html>)
- 4. Trading Holidays 2026 (https://bnbfin.com/Trading_Holidays.html)
- 5. Escalation Matrix (<https://bnbfin.com/escalation-matrix.html>)
- 6. Disclosure of Complaints (<https://bnbfin.com/disclosure-of-complaints.html>)
- 7. Investor Accessibility Audio (<https://bnbfin.com/Investor-Accessibility-Audio.html>)
- 8. Investor Accessibility Video (<https://bnbfin.com/Investor-Accessibility-Video.html>)
- 9. Terms & Conditions (<https://bnbfin.com/terms.html>)
- 10. Privacy Policy (<https://bnbfin.com/privacy.html>)
- 11. Blog Post template (<https://bnbfin.com/post.html>)

Follow this link to see how an accessible page behaves with a screen reader.

<https://www.washington.edu/accesscomputing/AU/after.html>

3. Assessment Constraints

This assessment combined automated scanning (Playwright + axe-core) with hands-on manual checks across the 11 public pages in scope: keyboard navigation testing, colour-contrast verification, and DOM/ARIA inspection. A small number of narrower points are flagged here rather than silently folded into the results above:

- Error Identification (3.3.1): the generic error-message behaviour was confirmed by inspecting the client-side submit handler rather than by an actual form submission, to avoid sending a real enquiry. This should be treated as code-level confirmation rather than an observed runtime submission.
- The back-office login portal (bo.bnbfin.com), external regulator portals (scores.sebi.gov.in, smartodr.in), and downloadable PDF/ZIP documents were explicitly out of scope and were not assessed as part of this review.
- No live screen-reader session (NVDA, JAWS, or VoiceOver) is documented as part of this round; findings rely on automated (axe-core) scanning and manual keyboard/DOM inspection via Playwright.
- Two data-quality corrections were made to the underlying checklist during this audit, noted here for transparency: the Conformance Level for 1.4.12 (Text Spacing) was corrected from "pass" to its correct level, "AA"; and the guideline description for 2.5.4 (Motion Actuation) was corrected after being found duplicated from 3.2.3 (Consistent Navigation) in the template.

We recommend the residual items in Section 9 be confirmed before treating any associated result above as final, particularly ahead of a formal compliance determination.

4. Tools / Methods Used

The following tools/methods were used for this review:

- Automated scanning with Playwright and axe-core across all 11 pages
- Manual keyboard-only navigation testing (Tab / Shift+Tab / Enter / Esc)
- Manual colour-contrast verification against computed styles
- DOM and ARIA structural inspection
- Annotated evidence screenshots captured per page (a11y-evidence-bnbfin.com)
- W3C WCAG 2.2 Success Criteria used as the assessment reference

Not used in this round: a live screen-reader session (NVDA, JAWS, or VoiceOver), and testing of the back-office login portal, external regulator portals, or downloadable PDF/ZIP documents — all explicitly out of scope. See Section 3.

5. Standard Followed

- Web Content Accessibility Guidelines 2.2 (WCAG 2.2), Levels A and AA

6. WCAG 2.2 Accessibility Guidelines

Legend: Pass = confirmed · Fail = confirmed issue, see Section 8 · Not applicable = criterion does not apply to this website.

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
Guideline 1.1 - Text Alternatives					
1	1.1.1 - Non-text Content	A	All non-text content that is presented to the user has a text alternative that serves the equivalent purpose	Pass	All images, SVG icons and image inputs carry appropriate text alternatives; decorative icons are marked aria-hidden. axe image-alt/svg-img-alt/object-alt returned zero violations on all 11 pages.
Guideline 1.2 - Time-based Media					
2	1.2.1 - Audio-only and Video-only (Prerecorded)	A	An alternative for time-based media is provided that presents equivalent information for prerecorded audio-only content and video-only content.	Fail	The investor awareness audio (audio-only, prerecorded) has no text transcript. The page offers only a 2-sentence topic description and a download link - equivalent information is not provided in text.
3	1.2.2 - Captions (Prerecorded)	A	Captions are provided for all prerecorded audio content in synchronized media.	Fail	The prerecorded investor awareness video has no captions: the <video> element contains no <track kind='captions'> and no burned-in captions alternative is offered.
4	1.2.3 - Audio Description or Media Alternative (Prerecorded)	A	An alternative for time-based media or audio description of the prerecorded video content is provided for synchronized media.	Fail	No audio description and no full media alternative (transcript/described text) is provided for the prerecorded video; the page only carries a short 2-sentence summary.
5	1.2.4 - Captions (Live)	AA	Captions are provided for all live audio content in synchronized media.	Not applicable	No live audio or live synchronized media is broadcast anywhere on the site.
6	1.2.5 - Audio Description (Prerecorded)	AA	Audio description is provided for all prerecorded video content in synchronized media.	Fail	No audio-described version of the prerecorded investor video is available (no AD track, no alternate described video).
Guideline 1.3 - Adaptable					
7	1.3.1 - Info and Relationships	A	Information, structure, and relationships conveyed through presentation can be programmatically determined or are available in text.	Pass	Semantic structure is programmatically sound: correct landmark regions (header/nav/main/footer), labelled form fields, native tables with <th> headers, and valid list markup. axe structural rules passed on all pages.
8	1.3.2 - Meaningful Sequence	A	When the sequence in which content is presented affects its	Pass	DOM order matches the visual reading order on every

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
9	1.3.3 - Sensory Characteristics	A	meaning, a correct reading sequence can be programmatically determined.	Pass	template; a 60-stop keyboard focus walk of the home page progressed strictly top-to-bottom through the layout.
			Instructions provided for understanding and operating content do not rely solely on sensory characteristics of components such as shape, color, size, visual location, orientation, or sound.		No instructions rely solely on shape, colour, size, orientation or sound; all cues (e.g. required-field asterisks) are paired with text labels.
10	1.3.4 - Orientation	AA	Content does not restrict its view and operation to a single display orientation, such as portrait or landscape, unless a specific display orientation is essential.		Layout is fully responsive with no orientation lock; no CSS or script restricts display to portrait or landscape.
11	1.3.5 - Identify Input Purpose	AA	The purpose of each input field collecting information about the user can be programmatically determined.	Pass	Contact-form fields collecting personal data carry correct autocomplete tokens (name, email, tel). axe autocomplete-valid passed on all pages.
Guideline 1.4 - Distinguishable					
12	1.4.1 - Use of Color	A	Color is not used as the only visual means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	Pass	Colour is never the sole carrier of information: trading-holiday status badges pair colour with the text 'Closed'/'Open', links are underlined or otherwise distinguished, and form errors are announced in text.
13	1.4.2 - Audio Control	A	If any audio on a Web page plays automatically for more than 3 seconds, either a mechanism is available to pause or stop the audio, or a mechanism is available to control audio volume independently from the overall system volume level.		No audio plays automatically anywhere on the site; the audio/video players are user-initiated with native controls.
14	1.4.3 - Contrast (Minimum)	AA	The visual presentation of text and images of text has a contrast ratio of at least 4.5:1 Large-scale text and images of large-scale text have a contrast ratio of at least 3:1;	Fail	120 element instances across all 11 pages fail the 4.5:1 minimum ratio, e.g. gold section labels #E8CC7A on white (1.57:1), 'Bullion'/'Metals' card headings #1A202C on #162A4D (1.14:1), green logo text #166534 on navy #0A1F44 (2.27:1), gold links #A07B2A on white (3.91:1), 'Closed' badges (3.57:1). See a11y-evidence-bnbfin.com/pages/001-home/v04-color-contrast.png and per-page close-ups v01-v25.

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
15	1.4.4 - Resize text	AA	Except for captions and images of text, text can be resized without assistive technology up to 200 percent without loss of content or functionality.	Pass	Text resizes to 200% without loss of content or functionality; no maximum-scale/user-scalable restrictions in the viewport meta, and a 200%-equivalent (640px) window shows no horizontal overflow or clipping.
16	1.4.5 - Images of Text	AA	If the technologies being used can achieve the visual presentation, text is used to convey information rather than images of text	Pass	No images of text are used; all headings, labels and body copy are real HTML text (the only raster content is the company logo, which is exempt).
17	1.4.10 - Reflow	AA	Content can be presented without loss of information or functionality, and without requiring scrolling in two dimensions	Fail	At 320px width three pages overflow horizontally (scrollWidth 400-407px vs 320px viewport), forcing two-dimensional scrolling; the header logo text is clipped. Evidence: a11y-evidence-bnbfin.com/pages/003-trading-holidays-html/reflow-320.png, /pages/006-investor-accessibility-audio-html/reflow-320.png, /pages/007-investor-accessibility-video-html/reflow-320.png.
18	1.4.11 - Non-text Contrast	AA	The visual presentation of the following have a contrast ratio of at least 3:1 against adjacent color(s)	Fail	Contact-form input boundaries fail the 3:1 non-text contrast minimum: inputs use a 1px rgba(255,255,255,0.18) border on a rgba(255,255,255,0.08) fill over navy (about 1.5:1 against the surrounding card), leaving field extents barely distinguishable.
19	1.4.12 - Text Spacing	AA	In content implemented using markup languages that support the following text style properties, no loss of content or functionality occurs by setting all of the following and by changing no other style property: Line height (line spacing) to at least 1.5 times the font size; Spacing following paragraphs to at least 2 times the font size; Letter spacing (tracking) to at least 0.12 times the font size; Word spacing to at least 0.16 times the font size.	Pass	Applying the SC text-spacing overrides (line-height 1.5, letter 0.12em, word 0.16em, paragraph 2em) produced no clipped, truncated or overlapping content on the home or data-table pages; axe avoid-inline-spacing passed site-wide.
20	1.4.13 - Content on Hover or Focus	AA	Where receiving and then removing pointer hover or keyboard focus triggers additional content to become visible and then hidden, the	Fail	The SERVICES navigation dropdown appears on pointer hover, overlays page content beneath it, and cannot be dismissed without moving the

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
			following are true: Dismissible,Hoverable,Persistent		pointer - Esc does not close it (no keydown handling on the menu; CSS :hover only).
Guideline 2.1 - Keyboard Accessible					
21	2.1.1 - Keyboard	A	All functionality of the content is operable through a keyboard interface without requiring specific timings for individual keystrokes	Pass	All functionality is keyboard operable: commodity cards (role=button, tabindex=0, Enter/Space handlers), tab panel (arrow-key support), FAQ accordions and download accordions (native buttons), chatbot (managed focus, inert when closed) and the nav dropdown (opens via :focus-within).
22	2.1.2 - No Keyboard Trap	A	If keyboard focus can be moved to a component of the page using a keyboard interface, then focus can be moved away from that component using only a keyboard interface.	Pass	A 60-stop Tab traversal of the home page and 25-stop traversal of terms.html completed with no focus trap; the chatbot dialog releases focus via Esc and close button, returning focus to the toggle.
Guideline 2.2 - Enough Time					
23	2.1.4 - Character Key Shortcuts	A	If a keyboard shortcut is implemented in content using only letter (including upper- and lower-case letters), punctuation, number, or symbol characters, then at least one of the following is true: Turn off: A mechanism is available to turn the shortcut off; Remap: A mechanism is available to remap the shortcut to include one or more non-printable keyboard keys (e.g., Ctrl, Alt); Active only on focus: The keyboard shortcut for a user interface component is only active when that component has focus.	Not applicable	No single-character key shortcuts are implemented anywhere on the site.
24	2.2.1 - Timing Adjustable	A	For each time limit that is set by the content, at least one of the following is true: Turn off: The user is allowed to turn off the time limit before encountering it; or Adjust: The user is allowed to adjust the time limit before encountering it over a wide range that is at least ten times the length of the default setting; or Extend: The user is warned before time expires and given at least 20 seconds to extend the time limit with a simple action (for example, "press the space bar"), and the user is allowed to	Not applicable	No time limits, session timeouts or timed content exist on the audited pages.

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
25	2.2.2 - Pause, Stop, Hide	A	extend the time limit at least ten times; User-controllable mechanisms must be provided for pausing, stopping, or hiding automatically moving, blinking, scrolling, or updating information, unless such actions are essential to the associated activity.	Fail	The footer regulatory disclaimer auto-scrolls continuously (CSS animation scrollLeft 60s linear infinite), starts automatically, runs indefinitely in parallel with other content, and the only pause mechanism is mouse hover - unavailable to keyboard and touch users.
Guideline 2.3 - Seizures and Physical Reactions					
26	2.3.1 - Three Flashes or Below Threshold	A	Web pages do not contain anything that flashes more than three times in any one second period, or the flash is below the general flash and red flash thresholds.	Pass	No flashing content of any kind; animations are gentle fades/transitions well below the three-flashes-per-second threshold, and prefers-reduced-motion is honoured.
Guideline 2.4 - Navigable					
27	2.4.1 - Bypass Blocks	A	A mechanism is available to bypass blocks of content that are repeated on multiple Web pages.	Fail	The 'Skip to main content' link on terms.html and privacy.html points to index.html#main-content, so activating it navigates to the home page instead of bypassing the repeated header on the current page; on post.html the #main-content target id does not resolve. Engine evidence: custom skip-link probe, a11y-evidence-bnbfin.com results.json (terms/privacy) and a11y-evidence-bnbfin.com-post.
28	2.4.2 - Page Titled	A	Web pages have titles that describe topic or purpose.	Fail	post.html reuses the home page title 'BnB Financial Services Pvt. Ltd. - SEBI Registered Commodity Broker' verbatim, so the blog-post template's title describes neither its topic nor its distinct purpose (duplicate-title analysis, a11y-evidence-bnbfin.com-post). All other pages have unique descriptive titles.
29	2.4.3 - Focus Order	A	If a Web page can be navigated sequentially and the navigation sequences affect meaning or operation, focusable components receive focus in an order that preserves meaning and operability.	Pass	Focus order follows the visual and logical order on every page (skip link, chat toggle, header, navigation, page content, footer); no tabindex values greater than zero are used.

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
30	2.4.4 - Link Purpose (In Context)	A	The purpose of each link can be determined from the link text alone or from the link text together with its programmatically determined link context	Pass	Every link has a descriptive accessible name; axe link-name passed on all pages and the few short links ('click here to download') are disambiguated by their same-sentence programmatic context.
31	2.4.5 - Multiple Ways	AA	More than one way is available to locate a Web page within a set of Web pages except where the Web Page is the result of, or a step in, a process.	Pass	Multiple ways exist to reach every page: the header navigation menu, footer quick-links on each template, and in-content cross-links between the legal and investor pages.
32	2.4.6 - Headings and Labels	AA	Headings and labels describe topic or purpose.	Pass	Headings and labels are descriptive throughout ('Trading Holidays 2026', 'Escalation Matrix', 'Interested In', 'Full Name'); section labels match their content.
33	2.4.7 - Focus Visible	AA	Any keyboard operable user interface has a mode of operation where the keyboard focus indicator is visible.	Fail	The floating chat toggle button shows no visible focus indicator: outline is removed (outline:none) and its box-shadow is identical focused vs unfocused, on 5 pages (custom focus probe: 'button#chatbotToggleBtn no indicator'). All other sampled controls show a visible indicator.
34	2.4.11 Focus Not Obscured (Minimum)	AA	When a user interface component receives keyboard focus, the component is not entirely hidden due to author-created content.	Pass	The only sticky element is the 71px header; browsers scroll focused controls fully into view beneath it and no focused component is entirely hidden by author-created content.
Guideline 2.5 - Input Modalities					
35	2.5.1 - Pointer Gestures	A	All functionality that uses multipoint or path-based gestures for operation can be operated with a single pointer without a path-based gesture, unless a multipoint or path-based gesture is essential.	Not applicable	No multipoint or path-based gestures are used; all interaction is single tap/click.
36	2.5.2 - Pointer Cancellation	A	For functionality that can be operated using a single pointer, at least one of the following is true: No Down-Event: The down-event of the pointer is not used to execute any part of the function; Abort or Undo: Completion of the function is on the up-event, and a mechanism is available to abort the function	Pass	All pointer interactions activate on the up-event via native click semantics; no down-event triggers and no custom pointer handling that prevents cancellation.

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
37	2.5.3 - Label in Name	A	before completion or to undo the function after completion For user interface components with labels that include text or images of text, the name contains the text that is presented visually.	Pass	Accessible names contain the visible label text for every labelled control (nav links, buttons, form fields); icon-only controls use aria-label with no conflicting visible text.
38	2.5.4 - Motion Actuation	A	All functionality that can be operated by device motion or user motion can also be operated by user interface components, and responding to the motion can be disabled to prevent accidental actuation.	Not applicable	No functionality is operated by device motion or user motion (no shake/tilt features).
39	2.5.7-Dragging Movements	AA	All functionality that uses a dragging movement for operation can be achieved by a single pointer without dragging, unless dragging is essential or the functionality is determined by the user agent and not modified by the author.	Not applicable	No functionality requires dragging movements; there are no sliders, sortable lists or drag-and-drop features.
40	2.5.8-Target Size (Minimum)	AA	The size of the target for pointer inputs is at least 24 by 24 CSS pixels	Fail	Footer telephone and e-mail links are 17px tall, stacked with no spacing, failing the 24x24px minimum on 5 pages (8 instances). Evidence: a11y-evidence-bnbfin.com/pages/008-terms-html/v06-target-size.png, /pages/001-home close-ups v13-v14.
Guideline 3.1 - Readable					
41	3.1.1 - Language of Page	A	The default human language of each Web page can be programmatically determined.	Pass	Every page declares lang='en' on the <html> element; axe html-has-lang and html-lang-valid passed on all 11 pages.
42	3.1.2 - Language of Parts	AA	The human language of each passage or phrase in the content can be programmatically determined.	Pass	All content is in English with no foreign-language passages (vernacular document names are English words); axe valid-lang passed site-wide.
Guideline 3.2 - Predictable					
43	3.2.1 - On Focus	A	When any user interface component receives focus, it does not initiate a change of context.	Pass	Receiving focus never triggers a change of context; focus moves opened by the chatbot are user-initiated activations, not focus events.
44	3.2.2 - On Input	A	Changing the setting of any user interface component does not automatically cause a change of context unless the user has been	Pass	No input or selection auto-submits or changes context: the service <select> has no change handler and the form

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
45	3.2.3 - Consistent Navigation	AA	advised of the behavior before using the component.	Pass	submits only on explicit button activation.
			Navigational mechanisms that are repeated on multiple Web pages within a set of Web pages occur in the same relative order each time they are repeated, unless a change is initiated by the user.		Repeated navigation (header menu, footer quick links, legal links) appears in the same relative order on every page that carries it.
46	3.2.4 - Consistent Identification	AA	Components that have the same functionality within a set of Web pages are identified consistently.	Pass	Recurring components are identified consistently across pages: chat toggle ('Open Chat Support'), skip link text, footer contact links and download links share identical labels and icons.
47	3.2.6-Consistent Help	A	If a Web page contains any of the following help mechanisms, and those mechanisms are repeated on multiple Web pages within a set of Web pages, they occur in the same order relative to other page content, unless a change is initiated by the user: Human contact details; Human contact mechanism; Self-help option; A fully automated contact mechanism.	Pass	Help mechanisms (phone, e-mail, address and grievance links) appear in the same relative footer position and order on every page containing them.
Guideline 3.3 - Input Assistance					
48	3.3.1 - Error Identification	A	If an input error is automatically detected, the item that is in error is identified and the error is described to the user in text.	Fail	When required fields are missing, the form shows one generic message - 'Please fill in all required fields (Name, Email, Phone).' - regardless of which field is empty; the specific item in error is not identified, fields are not marked aria-invalid, and no per-field error text is rendered (verified in the client-side submit handler; form not submitted).
49	3.3.2 - Label or Instructions	A	Labels or instructions are provided when content requires user input.	Pass	Every form control has a visible programmatic label (<label for>) plus placeholder examples; required fields are marked with an asterisk and aria-required='true'.
50	3.3.3 - Error Suggestion	AA	If an input error is automatically detected and suggestions for correction are known, then the suggestions are provided to the user, unless it would jeopardize the security or purpose of the content.	Pass	Error messages include the correction needed: the alert names the required fields to complete, and expected formats are shown via labels and placeholder examples (e.g.

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
51	3.3.4 - Error Prevention (Legal, Financial, Data)	AA	For web pages involving legal commitments, financial transactions, or data modifications, there must be a mechanism: either submissions are reversible, user-input data is checked for errors with correction opportunities, or there is a confirmation process before finalizing submissions.	Not applicable	'you@example.com', '+91 XXXXX XXXXX'). The audited pages contain no legal commitments, financial transactions or user-data modification - the only form is a simple contact enquiry.
52	3.3.7-Redundant Entry	A	Information previously entered by or provided to the user that is required to be entered again in the same process is either: auto-populated, or available for the user to select.	Not applicable	No multi-step processes exist; the single-step contact form never asks for previously entered information again.
53	3.3.8-Accessible Authentication (Minimum)	AA	A cognitive function test (such as remembering a password or solving a puzzle) is not required for any step in an authentication process unless that step provides at least one of the following: Alternative: Another authentication method that does not rely on a cognitive function test. Mechanism: A mechanism is available to assist the user in completing the cognitive function test. Object Recognition: The cognitive function test is to recognize objects. Personal Content: The cognitive function test is to identify non-text content the user provided to the Web site.	Not applicable	No authentication occurs on the audited public pages (the bo.bnbfin.com login portal is out of scope).
Guideline 4.1 - Compatible					
54	4.1.1 - Parsing	A	In content implemented using markup languages, elements have complete start and end tags, elements are nested according to their specifications, elements do not contain duplicate attributes, and any IDs are unique, except where the specifications allow these features.	Not applicable	SC 4.1.1 Parsing was removed in WCAG 2.2; additionally no duplicate ids or broken markup were detected by the scan.
55	4.1.2 - Name, Role, Value	A	For all user interface components (including but not limited to: form elements, links and components generated by scripts), the name and role can be programmatically determined; states, properties, and values that can be set by	Fail	The chatbot window keeps focusable controls inside a container marked aria-hidden='true' on disclosure-of-complaints.html (axe aria-hidden-focus, serious): assistive technologies are told the dialog does not exist while its close

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
			the user can be programmatically set; and notification of changes to these items is available to user agents, including assistive technologies.		button, input and send button remain in the page. Evidence: a11y-evidence-bnbfin.com/pages/005-disclosure-of-complaints-html/v01-aria-hidden-focus.png.
56	4.1.3 - Status Messages	AA	In content implemented using markup languages, status messages can be programmatically determined through role or properties such that they can be presented to the user by assistive technologies without receiving focus.	Pass	Status messages are programmatically determinable: the form status region uses role='alert' and the page includes aria-live regions, so success and error updates are announced without moving focus.

7. Summary of Key Findings

Confirmed issues from this review (detailed in Section 8):

Sr. No.	Confirmed Issue	Status
1	Missing Text Transcript for Investor Awareness Audio	OPEN
2	Missing Captions and Audio Description for Investor Awareness Video	OPEN
3	Insufficient Text Contrast Sitewide	OPEN
4	Reflow Failure at 320px Viewport Width	OPEN
5	Insufficient Contact-Form Input Border Contrast	OPEN
6	Services Dropdown Not Dismissible on Hover or Focus	OPEN

8. Detailed Technical Report with Recommendations

8.1 Missing Text Transcript for Investor Awareness Audio

STATUS	OPEN
WCAG 2.2 REFERENCE	1.2.1 Audio-only and Video-only (Prerecorded) (Level A)
DESCRIPTION	The investor awareness audio (audio-only, prerecorded) has no text transcript. The page offers only a two-sentence topic description and a download link — equivalent information is not provided in text.
IMPACT ON USERS	Deaf and hard-of-hearing users, and anyone unable to play audio, have no way to access the information in this file, since the on-page summary does not cover its full content.
AFFECTED URL	https://bnbfin.com/Investor-Accessibility-Audio.html — <audio> player (Investor_Accessibility_Audio_Information.mp4).
RECOMMENDATIONS	Publish a full text transcript of the audio directly on the page (or as an accessible HTML link) covering all spoken information.

8.2 Missing Captions and Audio Description for Investor Awareness Video

STATUS	OPEN
WCAG 2.2 REFERENCE	1.2.2 Captions – Prerecorded (Level A) / 1.2.3 Audio Description or Media Alternative – Prerecorded (Level A) / 1.2.5 Audio Description – Prerecorded (Level AA)
DESCRIPTION	The prerecorded investor awareness video has no captions (the <video> element contains no <track kind="captions"> and no burned-in caption alternative), no audio description, and no full media alternative such as a transcript. The page carries only a short two-sentence summary.
IMPACT ON USERS	- Deaf and hard-of-hearing users cannot access the video's spoken content, since no captions are provided. - Blind and low-vision users cannot access visual information conveyed only on screen, since no audio description or descriptive transcript is provided.
AFFECTED URL	https://bnbfin.com/Investor-Accessibility-Video.html — <video> element (VID-20260712-WA0020.mp4).
RECOMMENDATIONS	- Add a synchronized WebVTT caption track (<track kind="captions" srclang="en">) covering all speech and meaningful sounds. - Provide a descriptive transcript of the video (dialogue plus important visual information) on the page, or produce an audio-described version.

8.3 Insufficient Text Contrast Sitewide

STATUS	OPEN
WCAG 2.2 REFERENCE	1.4.3 Contrast – Minimum (Level AA)
DESCRIPTION	120 element instances across all 11 pages fail the 4.5:1 minimum contrast ratio — for example, gold section labels (#E8CC7A on white, 1.57:1), “Bullion”/“Metals” card headings (#1A202C on #162A4D, 1.14:1), green logo text (#166534 on navy #0A1F44, 2.27:1), gold text links (#A07B2A on white, 3.91:1), and “Closed” status badges (3.57:1).

IMPACT ON USERS	Low-vision users and users in bright ambient light may be unable to read text that falls this far below the required ratio — several instances, as low as 1.14:1, are close to invisible against their background.
AFFECTED URL	All 11 pages — section labels, commodity-card headings, header logo text, gold text links, table badges (see Section 2 for the full page list).
RECOMMENDATIONS	- Darken the gold text colour to at least #8A6D1F on white. - Use white text on the navy commodity cards instead of the current dark heading colour. - Lighten the header logo green to reach 4.5:1 (3:1 is sufficient for text 24px+ or 19px+ bold).

8.4 Reflow Failure at 320px Viewport Width

STATUS	OPEN
WCAG 2.2 REFERENCE	1.4.10 Reflow (Level AA)
DESCRIPTION	At a 320px viewport width, three pages overflow horizontally (measured scrollWidth of 400–407px against the 320px viewport), forcing two-dimensional scrolling; the header logo text is clipped.
IMPACT ON USERS	Users who zoom to 400% — which produces an effective 320px CSS viewport — must scroll in two directions to read content, which is disorienting and can cause content to be missed, particularly for users with low vision or cognitive disabilities.
AFFECTED URL	https://bnbfin.com/Trading_Holidays.html , /Investor-Accessibility-Audio.html , /Investor-Accessibility-Video.html — page header/logo block and wide content.
RECOMMENDATIONS	- Allow the header logo text to wrap or truncate gracefully below 400px. - Apply max-width:100% and overflow-wrap to wide content blocks so no horizontal scrolling occurs at 320px.

8.5 Insufficient Contact-Form Input Border Contrast

STATUS	OPEN
WCAG 2.2 REFERENCE	1.4.11 Non-text Contrast (Level AA)
DESCRIPTION	Contact-form input boundaries fail the 3:1 non-text contrast minimum: inputs use a 1px rgba(255,255,255,0.18) border on a rgba(255,255,255,0.08) fill over navy — roughly 1.5:1 against the surrounding card — leaving field extents barely distinguishable.
IMPACT ON USERS	Low-vision users may not be able to see where a form field begins and ends, making the contact form difficult to use accurately.
AFFECTED URL	https://bnbfin.com/#get-in-touch-form and https://bnbfin.com/index.html — .form-group input/select/textarea borders.
RECOMMENDATIONS	Raise the input border to at least rgba(255,255,255,0.5), or use a solid colour, to reach at least 3:1 against the adjacent navy background.

8.6 Services Dropdown Not Dismissible on Hover or Focus

STATUS	OPEN
--------	-------------

WCAG 2.2 REFERENCE	1.4.13 Content on Hover or Focus (Level AA)
DESCRIPTION	The SERVICES navigation dropdown appears on pointer hover and overlays page content beneath it, but cannot be dismissed without moving the pointer away — pressing Escape does not close it, since the menu has no keydown handling and relies solely on CSS :hover.
IMPACT ON USERS	Sighted keyboard users, and users who trigger the dropdown accidentally, cannot dismiss it without a mouse, and it may persist over content they are trying to read.
AFFECTED URL	https://bnbfin.com/ and /index.html — header nav “SERVICES” dropdown (.nav-dropdown > .dropdown-menu).
RECOMMENDATIONS	Add an Escape-key handler that hides the open dropdown, and re-collapse it on focus loss, so hover-triggered content is dismissible without pointer movement.

8.7 Auto-Scrolling Footer Disclaimer Cannot Be Paused

STATUS	OPEN
WCAG 2.2 REFERENCE	2.2.2 Pause, Stop, Hide (Level A)
DESCRIPTION	The footer regulatory disclaimer auto-scrolls continuously (a CSS animation, 60 seconds, linear, infinite), starts automatically, and runs indefinitely alongside other content. The only pause mechanism is mouse hover, which is unavailable to keyboard and touch users.
IMPACT ON USERS	Keyboard- and touch-only users cannot stop or pause the moving text, which can be distracting for users with attention-related or vestibular conditions and may make the surrounding content harder to read.
AFFECTED URL	Shared footer/header template — https://bnbfin.com/, /index.html, /terms.html, /privacy.html, /post.html — .scroll-disclaimer-track.
RECOMMENDATIONS	Add a visible, keyboard-operable pause/stop button for the scrolling disclaimer (an aria-pressed toggle that sets animation-play-state:paused), or replace the animation with static, wrapped text.

8.8 Broken Skip Links on Terms, Privacy, and Blog Post Pages

STATUS	OPEN
WCAG 2.2 REFERENCE	2.4.1 Bypass Blocks (Level A)
DESCRIPTION	The “Skip to main content” link on terms.html and privacy.html points to index.html#main-content, so activating it navigates to the home page instead of bypassing the repeated header on the current page. On post.html, the #main-content target id does not resolve at all.
IMPACT ON USERS	Keyboard and screen-reader users on these three pages who use the skip link are taken away from the page they were reading (or nowhere at all), rather than past the repeated header content as intended.
AFFECTED URL	https://bnbfin.com/terms.html, /privacy.html — a.skip-link (href="index.html#main-content"); /post.html — a.skip-link with unresolved target.
RECOMMENDATIONS	Point each page's skip link at that page's own main landmark (href="#main-content").

- Ensure id="main-content" exists on the <main> element of every page, including post.html.

8.9 Duplicate Page Title on Blog Post Template

STATUS	OPEN
WCAG 2.2 REFERENCE	2.4.2 Page Titled (Level A)
DESCRIPTION	post.html reuses the home page's title, "BnB Financial Services Pvt. Ltd. - SEBI Registered Commodity Broker", verbatim, so the blog-post template's title describes neither its topic nor its distinct purpose. All other pages have unique, descriptive titles.
IMPACT ON USERS	• Screen-reader users, and anyone switching between browser tabs, cannot distinguish a blog post from the home page by its title.
AFFECTED URL	https://bnbfin.com/post.html — <title> element.
RECOMMENDATIONS	• Set a dynamic title on post.html, e.g. "<Post title> — BnB Financial Services Pvt. Ltd.", populated from the loaded article.

8.10 No Visible Focus Indicator on Chat Toggle Button

STATUS	OPEN
WCAG 2.2 REFERENCE	2.4.7 Focus Visible (Level AA)
DESCRIPTION	The floating chat-toggle button shows no visible focus indicator: its outline is removed (outline:none) and its box-shadow is identical whether focused or unfocused, confirmed on 5 pages. All other sampled controls show a visible focus indicator.
IMPACT ON USERS	• Keyboard-only users cannot see when the chat toggle button has focus, making it hard to know whether pressing Enter or Space will activate it.
AFFECTED URL	Shared footer/header template — https://bnbfin.com/, /index.html, /terms.html, /privacy.html, /post.html — button#chatbotToggleBtn.
RECOMMENDATIONS	• Add a clearly visible focus style, e.g. #chatbotToggleBtn:focus-visible { outline: 3px solid #E8CC7A; outline-offset: 2px; }.

8.11 Footer Contact Links Below Minimum Target Size

STATUS	OPEN
WCAG 2.2 REFERENCE	2.5.8 Target Size – Minimum (Level AA)
DESCRIPTION	Footer telephone and e-mail links are 17px tall and stacked with no spacing, failing the 24×24px minimum on 5 pages (8 instances total).
IMPACT ON USERS	• Users with motor impairments, or anyone using a touchscreen, may find these links difficult to tap accurately, increasing the risk of activating the wrong link.
AFFECTED URL	Shared footer/header template — https://bnbfin.com/, /index.html, /terms.html, /privacy.html, /post.html — footer a[href='tel:+914043334857'] and a[href='mailto:info@bnbfin.com'].
RECOMMENDATIONS	• Give the footer contact links display:inline-block with min-height:24px and at least 8px of vertical margin, so each target (or its effective spacing) meets 24×24px.

8.12 Generic Contact-Form Error Message (No Field-Level Identification)

STATUS	OPEN
WCAG 2.2 REFERENCE	3.3.1 Error Identification (Level A)
DESCRIPTION	When required fields are missing, the form shows one generic message — “Please fill in all required fields (Name, Email, Phone).” — regardless of which field is actually empty. The specific item in error is not identified, fields are not marked aria-invalid, and no per-field error text is rendered. This was verified by inspecting the client-side submit handler rather than by an actual form submission.
IMPACT ON USERS	Users, and screen-reader users in particular, cannot tell which specific field needs correction from the generic message alone, forcing them to re-check every field.
AFFECTED URL	https://bnbfin.com/#get-in-touch-form and /index.html — #contact-form validation (#contact-form-status).
RECOMMENDATIONS	Validate per field: set aria-invalid="true" on the offending input, render an inline error message associated via aria-describedby, and name the specific field in the alert text.

8.13 Chatbot Window Traps Focus While Hidden from Assistive Technology

STATUS	OPEN
WCAG 2.2 REFERENCE	4.1.2 Name, Role, Value (Level A)
DESCRIPTION	On disclosure-of-complaints.html, the chatbot window keeps focusable controls inside a container marked aria-hidden="true" (flagged by axe's aria-hidden-focus rule as “serious”). Assistive technology is told the dialog does not exist, while its close button, input, and send button remain in the page and keyboard-focusable.
IMPACT ON USERS	Screen-reader users can tab into controls their screen reader has been told don't exist, which is confusing and can leave them interacting with a “hidden” dialog with no announced context.
AFFECTED URL	https://bnbfin.com/disclosure-of-complaints.html — div#chatbotWindow[aria-hidden='true'] containing button/input.
RECOMMENDATIONS	Apply the inert attribute (as already done in other pages' load scripts) whenever aria-hidden="true" is set on the chatbot window, or remove aria-hidden and rely on inert plus display:none so hidden controls are also removed from the tab order.

9. Recommended Residual Verification

The items below were not exhaustively confirmed in this round of testing (see Section 3) and should be run before treating any associated result in Section 6 as final:

Category	Success Criteria	Recommended Verification Method
Form submission behaviour	3.3.1	Submit the contact form with missing or invalid data in a staging or disposable-test environment to confirm the generic error message and lack of field-level identification are reproduced at runtime, not only in the client-side code.
Screen reader behaviour	General	Run a live NVDA/JAWS (Windows) and/or VoiceOver (macOS/iOS) session, particularly on the chatbot window (4.1.2), the SERVICES dropdown (1.4.13), and the corrected skip links (2.4.1), to confirm the fixes behave as expected for real assistive-technology users.
Out-of-scope areas	N/A	Assess the back-office login portal (bo.bnbfin.com), external regulator portals (scores.sebi.gov.in, smartodr.in), and any downloadable PDF/ZIP documents separately, since all were explicitly excluded from this review's scope.
